

TK Steelcom welcomes 2 new MDs

ThyssenKrupp Steelcom's former MD, Richard Cook was assured that he was leaving the company in good hands. Joseph Commins, formerly General Manager, and Byung-Yong Jang, Technical Sales Manager, has succeeded Richard as managing directors of ThyssenKrupp Steelcom Australia/NZ. Richard's successors will inherit a company well placed to embark on the next phase as it pursues strategic growth opportunities in new markets in the Aust/NZ piling, and most recently trench/shoring industries.

TK Steelcom Sales Dept revamped

ThyssenKrupp Steelcom is pleased to announce the changes in our Sales Department, effective immediately.

NSW, Guy Cook, NSW Sales Representative 02 9409 1777

These experienced company reps will focus on leading the market with our specialised steel sheet pile and piling equipment sale or hire and services.

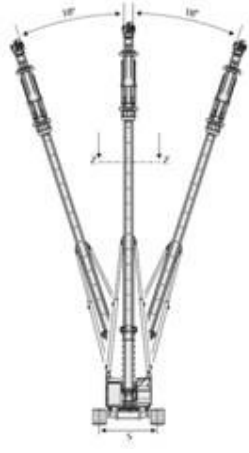

Key focus will be: to improve our customer service through understanding the local market and improving availability of sheet piles through local stocking.

Please contact the local rep in your area for all your steel sheet pile and piling requirement. []

Banut 655 now available in Australia

ThyssenKrupp Steelcom is pleased to introduce to Australia the BANUT Fixed Leader Mast – Banut 655. Particularly designed for impacting, primarily pre-fab concrete piles, but also pipes, beams, sheet piles and wood piles can be driven into the soil. Besides impact hammers also vibrators, auger drives and Hydro-Press-Systems can be applied.

BANUT fixed leader mast has high strength and stability, so that with impacting procedures inclinations up to 18° laterally and forward and 45° in the back can be driven. In addition they are characterized by a large usable length with compact transportation dimensions.

These hammers provide heavy impacting ability that has been largely unavailable in the Australian and New Zealand markets to date.

For more info or to view the Banut Piling Rigs range, call 02 9409 1777 to discuss. []

Piling & Deep Foundations 2009 goes “Downunder”

Accurate Site Investigations, Innovative Piling Techniques and Designing & Testing of Piles.

Piling and Deep Foundations '09 has been developed on the back of the unprecedented success this event has had in Dubai, Hong Kong and Saudi Arabia. Over 500 piling specialists have already gained critical industry knowledge and valuable partnerships at these events.

Now, for the first time in Australia **Piling and Deep Foundations '09** will ensure Australia continues in this vein of exceptional events. The excellent line up of speakers and topics will guarantee your challenges are discussed, debated and **solutions found**. Quite simply you will learn the **latest ideas and techniques** the Australian industry has to offer.

To be held on 30 November – 2 December 2009 at The Sebel and Citigate King George Square, Brisbane QLD.

ThyssenKrupp Steelcom is excited to be one of the exhibitors to this event.

Various case studies presented will also outline Australia's leading piling projects such as **Gateway Bridge, Airport Link, Soul**, amongst many others. A very **technically based agenda** will be presented by leading piling contractors, geotechnical engineers, ground improvement engineers, consultants and academics.

For more info on the Piling & Deep Foundation Conference call TKSteelcom on 02 9409 1777 to discuss. []

InFocus: Muller MS-25H3

The vibrators in the H series with fixed eccentric moment are extremely robust and suitable for driving in loose to medium-dense soils. The “stretched” base plate in particular is ideal for driving and extracting pipes for in-situ concrete piles. The clamping devices on the base plate can be adjusted to allow a simple changeover to different pipe diameters on site.

For more info or to view the range of vibro and impact hammers, call ThyssenKrupp Steelcom on 02 9409 1777 to discuss. []
